

ACTIVE COILED TUBING SERVICES

Respond *Instantly* To Downhole Events...Each And Every Time.

Boost production of your reservoir treatment process. Monitor jobs downhole as they happen. Gain matchless quantitative feedback. Receive live insight direct from the wellbore.

ENJOY REAL-TIME RESERVOIR PERFORMANCE ENHANCEMENT

Imagine getting an accurate picture of what's happening downhole **each time** a treatment occurs. The facts you need to cross-reference observations using surface and petrophysical data are suddenly always accessible.

And as events unfold downhole over time, you build a reputation for responding to any and all issues as they occur...increasing the number of positive outcomes over past totals.

It's now possible.

Schlumberger ACTive Coiled Tubing Services enable intervention during downhole treatments as they are in-progress. With Schlumberger ACTive Coiled Tubing Services, your organization can:

- Achieve improved treatment production using real-time optimized data
- Realize cost reductions with the ability to intervene with one run
- Accomplish quicker chemical entry times into the hole without gravity reliance

HERE'S WHY YOU CAN CONSISTENTLY RECEIVE SIGNIFICANT INCREASES IN RESERVOIR PRODUCTIVITY

Schlumberger's ACTive Coiled Tubing Services dramatically improve production of your reservoirs using:

Active Matrix - Monitors injection rates, downhole pressure, and temperature to allow maximum fluid penetration and diversion while optimizing treatment volumes.

Active Cleanout - Provides differential pressure readings to avoid formation damage. Reduces the number of trips, total operating time, and penetration rate into the fill.

Active Perforating - Achieves accurate depth control in a single run and ensures target coverage while controlling hydrostatic balance to avoid formation damage.

Active Isolation - Attains accurate depth setting, sealing elements operation, and fluid placement intended for performing temporary or permanent coiled tubing zonal isolation in a single run.

Active Lift - Operations - Improves coiled tubing nitrogen lift operation time and fluid efficiency by continuously monitoring wellbore pressure while avoiding solids production.

Active Profiling - Enhances all ACTive services with downhole tubing profiling to provide a 3D temperature profile of the entire wellbore for monitoring treatment fluid placement.
